

Segmented Rim Diamond Saw Blade

This diamond blade is designed for efficient and precise cutting of various materials. It features a segmented rim with diamond grit and cooling slots to prevent overheating.

Product Overview

Segmented Rim Diamond Saw Blade

This high-performance segmented rim diamond saw blade is engineered for efficient and precise cutting across a variety of materials. Featuring a robust steel core with a protective blue coating, the blade is designed to withstand demanding applications. Integrated cooling slots help prevent overheating during extended use, ensuring consistent performance and durability for professional cutting tasks.

Technical Specifications

Key Cutting Features

- Diamond grit for precision
- Efficient material removal
- Heat management slots
- Versatile application range
