

Self-Contained Paint Spray Booth with Ventilation

This self-contained paint spray booth is designed for applying paint finishes to various objects. It features an integrated ventilation system to remove paint fumes and ensure a clean working environment.

Overview

Professional Self-Contained Spray Environment

The GL2 Paint Spray Booth provides a fully self-contained environment engineered for applying high-quality paint finishes to a variety of objects. Designed with operational safety and efficiency in mind, it features an integrated ventilation system with dedicated filters and ducts to effectively remove paint fumes and maintain a clean working atmosphere. The booth is constructed with durable white panels and includes a large, accessible door with viewing windows, ensuring both durability and ease of monitoring during the painting process.
