

Self-Priming Jet Pump for Clean Water

This self-priming jet pump is designed for pumping clean water and non-corrosive liquids. It is suitable for domestic water supply, small-scale irrigation, and pressure boosting applications.

Product Overview

JSW Series Self-Priming Jet Pump

The JSW Series electric pump is engineered for efficient water transfer and pressure boosting. Designed specifically for clean water and non-corrosive liquids, this self-priming unit is an ideal solution for domestic water supply systems and small-scale irrigation needs. Its robust construction and reliable hydraulic design ensure consistent performance in varied residential and light commercial applications.

Technical Specifications

Pump Type	Self-Priming Jet Pump
Suitable Fluids	Clean Water, Non-corrosive Liquids

Applications

Common Applications

- Domestic water supply
- Small-scale irrigation
- Pressure boosting systems

Key Features

Design Highlights

Robust Motor • Durable Pump Body • Efficient Hydraulic Design
