

Self-Priming Vortex Water Pump

This self-priming centrifugal pump is engineered for pumping liquids containing solids in suspension. The vortex impeller design facilitates the passage of solids without causing blockages.

Product Overview

Self-Priming Vortex Pump IDB35

The IDB35 is a high-performance self-priming centrifugal pump engineered for efficient fluid transfer, particularly in environments containing solids in suspension. Equipped with a specialized vortex impeller, it effectively prevents clogging while maintaining steady flow rates. This durable unit is constructed with a robust cast iron body, making it an ideal choice for demanding agricultural, industrial, and domestic applications.

Technical Specifications

Pump Type	Self-priming centrifugal vortex pump
Impeller Type	Vortex impeller

Construction

Pump Body Material	Cast Iron
Impeller Material	Corrosion-resistant material

Applications

Suitable Applications	Drainage, Irrigation, Water Transfer, Agricultural, Industrial, Domestic
