

Self-Priming Water Pump

This self-priming pump excels at efficient water transfer and pressure boosting. It is designed with a durable motor and corrosion-resistant components for reliable performance in residential, agricultural, and light industrial applications.

General Overview

Versatile Water Transfer Solution

This robust self-priming water pump is engineered for high-efficiency fluid transfer and reliable pressure boosting. Designed for longevity, it features corrosion-resistant components and a durable motor capable of supporting residential, agricultural, and light industrial tasks. Its automatic operation ensures ease of use and seamless integration into existing water systems.

Performance

Key Performance Indicators

1 standard

Self-priming capability

Features

Key Features

- Automatic operation
- Corrosion-resistant construction
- Durable heavy-duty motor
- Easy installation process

Applications

Suitable Applications

Residential, Agricultural, Light Industrial
