

Self-Propelled Conveyor System

This heavy machinery utilizes a conveyor belt system. It is self-propelled and suitable for various construction applications.

Product Overview

Self-Propelled Conveyor System

The LXL1200 is a robust self-propelled conveyor system designed for efficient material handling in demanding environments such as construction or road maintenance. Featuring a mobile design with integrated wheels, it offers high maneuverability and operational flexibility on-site. This heavy-duty machinery is built to streamline workflows and improve productivity for professional material transport tasks.

Technical Specifications

Mobility

Self-Propelled • Wheeled

Model Number

LXL1200

Primary Applications

Construction, Road Maintenance, Material Handling
