

Self-Propelled Lawn Roller

This self-propelled machine is a heavy-duty roller for leveling bumps and uneven grass. It promotes sward regeneration and retards the growth of weeds.

Product Overview

Professional Self-Propelled Lawn Roller

This self-propelled lawn roller is engineered for efficient soil compaction and surface leveling in agricultural and landscaping environments. Featuring a robust heavy-duty rolling drum and an integrated electric motor, it provides consistent propulsion for smooth operation. Its compact design ensures excellent maneuverability, making it an ideal tool for preparing seedbeds and maintaining high-quality turf surfaces.

Technical Specifications

Key Design Features

- Self-propelled operation
- Heavy-duty rolling drum
- Compact chassis for maneuverability

Power Source	Electric Motor
Primary Function	Soil Compaction, Seedbed Preparation, Surface Leveling

Application

Best For

Landscaping • Agriculture • Turf Maintenance
