

Semi-Automatic Carbon Dioxide Welder

This semi-automatic carbon dioxide welder is designed for industrial applications. Adjustable settings allow for optimal welding performance, and a robust power supply and cooling system ensure reliable operation during extended use.

Product Overview

Industrial CO2/MAG Welder

This semi-automatic carbon dioxide welder is engineered for demanding industrial applications. It features precise adjustable settings, including voltage and wire feed control, to ensure optimal welding performance across various tasks. Built for reliability, the unit incorporates a robust power supply and an efficient cooling system, making it suitable for extended operation in workshop or factory environments.

Technical Specifications

Model Series	NBC-250
Supported Processes	CO2, MAG

Key Features

Compatible Materials

- Steel
- Stainless Steel

Key Operational Features

Adjustable Voltage • Adjustable Wire Feed • Mobile Design • Robust Cooling System

Mobility	Yes
----------	-----
