

Semi-Automatic Case Packer

This semi-automatic case packer automates the process of loading products into cases with consistency. Its user-friendly interface allows for easy operation and adjustment, making it suitable for diverse industries.

Overview

Semi-Automatic Case Packer

This semi-automatic case packer is engineered to optimize packaging workflows in the food, pharmaceutical, daily chemical, and electrical sectors. It features an advanced servo-driven stacking and pushing system, integrated with a specialized non-return mechanism to ensure precision handling of soap boxes and similar products. While the machine automates stacking, product insertion, and case discharge, it retains a manual case-opening step for versatile operational control.

Technical Features

Automation Capabilities

- Servo-driven stacking system
- Servo-driven soap pushing mechanism
- Automated product insertion
- Automated case discharge
- Specialized non-return box mechanism
- Empty box blow-off system

Control Interface

PLC Control, Touch Screen Interface

Compliance and Safety

Certifications

CE Safety Standards

Industry Applications

Applicable Industries

- Food Industry
- Pharmaceutical Industry
- Daily Chemical Industry
- Electrical Industry
