

Semi-Electric Pallet Stacker 500kg

This semi-electric stacker is designed for lifting and transporting palletized loads. It features a maintenance-free battery and compact structure for easy operation in narrow spaces.

Overview

Semi-Electric Pallet Stacker

The CDSD5D Semi-Electric Pallet Stacker is designed for efficient lifting and transportation of palletized loads in warehouses and industrial settings. It features a robust steel frame and an imported hydraulic pump station for reliable performance. With its compact structure and semi-electric operation—combining manual pushing with electric lifting—this stacker is an ideal solution for maneuvering in narrow spaces while improving overall material handling efficiency.

Key Features

Key Features

- Imported hydraulic pump station with strong power
- Maintenance-free battery installed
- Compact structure for easy operation
- Suitable for use in narrow aisles

Technical Specifications

Model	CDSD5D
Drive Unit	Semi-electric
Operation Type	Pedestrian
