

Sequin Attaching Machine

This machine automates pinpoint sewing and thread rolling. It can sew 7 groups of pinpoint stitches with high efficiency and steady performance.

Overview

High-Efficiency Sequin Attaching

The FY2000-8075 is a specialized machine designed for automated sequin attachment, enabling precise pinpoint sewing and thread rolling. Engineered for high-volume textile production, this unit is capable of sewing 7 groups of pinpoint stitches simultaneously. Its robust design ensures steady performance and consistent quality across various apparel applications.
