

Shallow Well Jet Pump

This shallow well jet pump is designed for efficient water delivery from shallow wells. Its jet pump design allows it to draw water from depths typically up to 25 feet.

Product Overview

High-Efficiency Shallow Well Solution

The WJ10 shallow well jet pump is engineered to deliver reliable and consistent water pressure for residential and light commercial applications. Featuring a robust design for long-lasting performance, it is optimized for efficient water extraction from depths up to 25 feet. This unit is designed for ease of installation and low maintenance, ensuring a dependable solution for diverse water supply needs.

Technical Specifications

Maximum Suction Depth	25 ft
Applicable Use Cases	Residential, Light Commercial

Key Features

Main Features

- Robust construction for durability
- Consistent water pressure output
- Easy installation process
- Low maintenance requirement
