

Shielded CAT6A Patch Panel

This shielded CAT6A patch panel is designed for shielded cabling systems. It offers superior signal integrity and noise reduction, ensuring reliable data transmission in demanding network environments.

Product Overview

High-Performance Network Connectivity

This 19-inch 1U shielded patch panel is engineered for demanding CAT6A networking environments, offering superior signal integrity and noise reduction. Featuring 24 ports designed for keystone jacks, the modular layout allows for flexible configuration and easy installation. The included back bar ensures efficient cable management, making it an ideal choice for high-bandwidth data centers and enterprise network infrastructures.

Technical Specifications

Shielding

STP • Shielded

Rack Height

1 U

Port Density

24

Compatibility

CAT6A, Keystone Jacks

Features

Key Features

- 19-inch rack mount standard
- Blank patch panel design
- Integrated back bar for cable management
- Shielded construction for signal integrity
