

Shimano Compatible Bicycle Cassette

This bicycle cassette is a component of the drivetrain that provides multiple gear ratios. It consists of several sprockets of varying sizes, typically made of steel or aluminum, and is compatible with Shimano systems.

Overview

High-Performance Drivetrain Component

This bicycle cassette is engineered for reliable gear shifting and optimal power transfer. Designed for compatibility with standard drivetrain systems, it features a durable sprocket construction that ensures longevity under various riding conditions. Its multi-speed design allows for smooth transitions across varying terrain, making it an essential upgrade for maintaining drivetrain efficiency.

Technical Specifications

Smallest Sprocket	12 T
Lockring Torque	40 N-M
Compatibility	Shimano Compatible

Features

Materials

- Steel
- Aluminum
