

Single-Cylinder Air-Cooled Auto Engine

This is a single-cylinder, air-cooled engine. It features a carburetor fuel system, overhead valve (OHV) configuration, and a horizontally split crankcase.

Overview

High-Performance Single-Cylinder Engine

This single-cylinder, air-cooled engine is designed for reliable and efficient operation. Featuring an overhead valve (OHV) configuration and a horizontally split crankcase, it offers robust performance for various applications. The cast aluminum construction, combined with integrated cooling fins, ensures effective heat dissipation even during extended use.

Technical Specifications

Cooling System	Air-cooled
Cylinder Configuration	Single-cylinder
Valve Train	Overhead Valve (OHV)
Fuel System	Carburetor
Crankcase Design	Horizontally split

Construction & Materials

Material Composition	Cast Aluminum Cylinder Head, Cast Aluminum Block
Thermal Management	Yes

Starting System

Starter Type	Electric starter motor
