

Single-Cylinder Diesel Engine TR175

This single-cylinder diesel engine is designed for industrial and agricultural use. It features direct fuel injection, an air-cooling system, and a durable construction suitable for powering generators, water pumps, and tillers.

Overview

Industrial Power Solution

The TR175 is a robust single-cylinder diesel engine engineered for reliable performance in demanding agricultural and industrial environments. Featuring direct fuel injection and an efficient air-cooling system, this unit provides dependable power for equipment such as generators, water pumps, and tillers. Its durable construction is complemented by a compact design, ensuring ease of maintenance and long-term operational longevity.

Technical Specifications

Engine Configuration	Single-cylinder diesel
Fuel Delivery	Direct fuel injection
Cooling Method	Air-cooled

Performance Features

Operational Efficiency

1 unit Cylinder Count	0 Low Fuel Consumption
---------------------------------	----------------------------------

Key Features	Direct Injection, Air-Cooled, High-Capacity Fuel Tank, Easy Start Mechanism
--------------	---

Applications

Common Applications

- Generators
- Water pumps
- Tillers
- Industrial equipment
