

Single-Cylinder Four-Stroke Diesel Engine

This single-cylinder, four-stroke diesel engine features direct injection for improved fuel economy. Its durable cast iron construction and compact size make it suitable for various tasks, ensuring long-lasting performance.

Product Overview

Reliable Power Solution

The R190 is a single-cylinder, four-stroke diesel engine engineered for high reliability and efficiency in demanding work environments. Featuring direct injection technology, it optimizes fuel economy while delivering robust performance for agricultural machinery, generators, and irrigation pumps. Its durable cast iron construction ensures a long service life, making it a dependable choice for diverse operating conditions.

Technical Specifications

Engine Configuration	Single-cylinder, four-stroke
Fuel System	Direct injection

Key Features

Primary Advantages

- Compact design
- High fuel efficiency
- Easy maintenance
- Low emissions
- Durable cast iron construction

Applications

Common Applications	Agricultural machinery, Power generation, Water pumps
---------------------	---
