

# Single Drum Vibratory Roller

This single drum vibratory roller is designed for soil compaction. It is ideal for road construction and site preparation.

## Overview

### High-Performance Compaction Solution

This single drum vibratory roller is engineered for demanding soil compaction tasks in construction projects. Featuring a smooth drum design, it ensures efficient surface leveling and density for road construction and site preparation. The unit integrates a comfortable operator cabin to maximize productivity during long shifts, supported by a robust engine built for consistent, reliable performance.

## Key Features

### Design Highlights

- Smooth drum for uniform compaction
- Ergonomic operator cabin
- Robust, high-reliability engine

### Equipment Status

New • Heavy Duty

### Primary Applications

Road Construction, Site Preparation, Soil Compaction
