

Single-Phase Asynchronous Motor for Industrial Use

This single-phase asynchronous motor is designed for diverse industrial applications. The motor features robust construction with a finned housing for efficient cooling and comes in different power ratings and speeds, suitable for powering pumps, fans, and other machinery.

Product Overview

Industrial Efficiency

This single-phase asynchronous motor is engineered for reliability in demanding industrial environments. It features a robust, finned housing design that ensures efficient heat dissipation and optimal cooling performance during continuous operation. Versatile and durable, it is an ideal solution for powering various machinery including pumps, fans, and other industrial equipment.

Technical Specifications

Performance Highlights

1 ph
Phase

Motor Type	Single-Phase Asynchronous Motor
Cooling Method	Finned housing for passive cooling
Suitable Applications	Pumps, Fans, Industrial Machinery
