

Single-Phase Electronic Prepaid Watt-Hour Meter

This single-phase electronic prepaid watt-hour meter utilizes microelectronics technology and SMT production. Its performance index complies with the GB/T 18460.3-2001 standard.

Product Overview

Advanced Prepaid Metering Solution

The DDSY188 C1 is a single-phase electronic prepaid watt-hour meter designed for precise electrical energy measurement. Utilizing advanced microelectronics technology and SMT production processes, this device ensures reliable performance and compliance with industry standards. It features integrated CPU card technology for secure prepaid billing and includes essential indicators such as alarm and reverse direction monitoring.

Technical Specifications

Rated Current

5 A

Base Current

30 A

Maximum Current

Voltage & Frequency

Parameter	Value
Rated Voltage	220V
Rated Frequency	50Hz

Pulse Rate 3200 imp/kWh

Standards & Compliance

Standards GB/T 18460.3-2001

Features

Key Features

- CPU Card Prepaid Technology
- Alarm Indicator
- Reverse Direction Indication
- Pulse Output
