

Single Phase Static Watt-hour Meter

Single phase static watt-hour meter designed for accurate energy measurement. It features a digital display for easy reading and reliable performance.

Product Overview

Reliable Single Phase Energy Monitoring

This single phase static watt-hour meter is engineered for precise electrical consumption measurement in residential and light commercial environments. It features a clear digital display for easy reading and utilizes electronic static technology to ensure long-term stability and performance. Designed for accuracy and durability, it provides a dependable solution for monitoring energy usage.

Technical Specifications

Current Range

5 A

Base Current

30 A

Max Current

Accuracy Class

CL.2.0

Rated Voltage

220 V

Frequency

50 Hz

Design & Features

Key Features

- Single phase measurement
- Static electronic metering
- Impulse output indicator (IMP/kWh)
- High reliability for residential use

Display Type

Digital LCD / LED Display

Meter Type

Electronic Static Watt-hour Meter

Application

Suitable Applications

Residential, Light Commercial, Energy Monitoring
