

Single Pole Slide Dimmer Switch

This is a single-pole dimmer switch used to control lighting brightness. It operates on a 120VAC 60Hz power supply with a maximum load of 600W, and features a slide control and on/off switch.

Product Overview

Versatile Lighting Control

This single-pole slide dimmer switch is engineered for precise brightness control of LED lighting fixtures. Designed for standard electrical installations, it offers reliable performance with a user-friendly slide interface for smooth dimming. Its robust construction ensures safety and compliance for professional building applications.
