

Single Wheel Knurling Tool for Metalworking

This single wheel knurling tool is designed for creating a patterned surface on workpieces. It is typically used in metalworking to provide a better grip or for decorative purposes.

SINGLE WHEEL KNURLING TOOL

Product Overview

Precision Knurling Solution

This single wheel knurling tool is engineered for high-performance metalworking applications. It is specifically designed to create precise, patterned surfaces on rotating workpieces, enhancing grip and adding functional or decorative textures. The robust holder ensures consistent pressure and stability during the knurling process.

Technical Specifications

Tool Configuration	Single Wheel
Primary Application	Metalworking, Surface Patterning, Grip Enhancement
Operation	Pressure-based forming on rotating workpieces
