

Sintered Diamond Saw Blade

This sintered saw blade is designed for cutting hard materials. It features a segmented rim with diamond grit for efficient cutting and extended blade life.

Product Overview

Professional Grade Cutting Solution

This sintered diamond saw blade is engineered for high-performance cutting across demanding masonry materials. Featuring a specialized segmented rim design, it delivers consistent precision while significantly reducing vibrations during operation. Its robust construction ensures an extended service life, making it a reliable choice for professional construction projects and heavy-duty applications.

Technical Specifications

Blade Technology	Sintered Diamond
Rim Configuration	Segmented

Compatibility

Compatible Materials	Concrete, Stone, Masonry
----------------------	--------------------------

Performance Features

Performance Advantages

- High-performance diamond grit
- Vibration reduction design
- Extended service life
- Smooth and precise cutting
