

Slab Lifting Clamp for Concrete

This lifting clamp is designed for the safe and efficient handling of concrete slabs and other heavy materials. The clamp features a robust mechanical design with a scissor-action gripping mechanism that automatically adjusts to the slab's thickness, ensuring a secure hold.

Product Overview

Professional Slab Lifting Solution

This specialized lifting clamp is engineered for the safe and efficient handling of concrete slabs and heavy industrial materials. Featuring a robust scissor-action gripping mechanism, the device automatically adjusts to the thickness of the load to ensure a secure and reliable hold during operation. Designed for seamless integration with cranes and lifting equipment, it enhances workplace safety and streamlines heavy-duty material handling processes.

Technical Specifications

Key Features

- Automatic thickness adjustment
- Robust mechanical design
- High-strength steel construction
- Designed for construction and industrial environments

Gripping Mechanism	Scissor-action
Operation	Automatic adjustment to slab thickness
Construction Material	High-strength steel
Equipment Compatibility	Cranes, Lifting Equipment
