

Slim Profile Escalator for Indoor Use

This slim escalator provides efficient vertical transportation in commercial and public spaces. Its compact design saves space while ensuring durability for high-traffic environments, and incorporates multiple safety mechanisms.

Product Overview

Compact Vertical Mobility

This slim-profile escalator is specifically engineered for high-efficiency vertical transportation within commercial and public environments. Its compact design ensures space-saving installation, making it ideal for indoor settings like shopping malls, airports, and subway stations. Built for durability in high-traffic areas, the unit integrates advanced mechanical components and comprehensive safety systems to ensure reliable passenger transport.

Technical Specifications

Core Drive Systems

- Step chain system
- Handrail drive
- Motor control unit

Suitable Environments

Shopping Malls, Airports, Subway Stations, Indoor Commercial

Safety Systems

Safety Features

Emergency Stop Buttons • Skirt Deflectors • Step Level Monitoring
