

Small Engine Carburetor Assembly

This carburetor assembly is designed for small engines, suitable for motorcycles, scooters, and similar applications. It ensures optimal fuel delivery and efficient engine performance.

Product Overview

Precision Engine Component

This carburetor assembly is engineered specifically for small engine applications, including motorcycles and scooters. It is constructed from durable metal components designed to withstand regular wear while ensuring consistent performance. The unit features a standard float bowl, throttle lever, and fuel inlet configuration, allowing for precise air-fuel mixture adjustments to optimize engine efficiency.

Technical Specifications

Adjustment Controls

- Air-fuel mixture adjustment screws
- Throttle lever control
- Fuel inlet system

Key Components

Float Bowl • Throttle Lever • Fuel Inlet

Construction Material	High-durability metal alloy
Compatibility	Motorcycles, Scooters, Small Engines
