

Smart Home Automation Hub

This smart hub is a central control unit designed for home automation and security systems. It facilitates communication between various smart devices, enabling seamless integration and control.

Product Overview

Smart Home Automation Hub

The MKHUB1 is a central control unit engineered for professional home automation and security system integration. It features a sleek, minimalist design that seamlessly blends into modern environments while providing robust, reliable connectivity. By supporting advanced wireless protocols, this hub facilitates high-performance communication between various smart devices for an efficient and secure user experience.

Technical Specifications

CPU Model	RTL8197FNT
Flash Memory	8 MB
SDRAM	64 MB
System Architecture	Linux

Connectivity

Wireless Protocols	802.15.4, ZigBee PRO
