

SMD Rework Station

This SMD rework station is designed for soldering and desoldering surface mount components. It features adjustable temperature and airflow controls, allowing for precise and efficient rework.

Overview

Professional SMD Rework Station

This versatile rework station is engineered for the precise soldering and desoldering of surface mount components. Equipped with integrated hot air functionality and fine-tuned temperature controls, it provides the accuracy required for professional electronics repair and prototyping. Its intuitive interface allows technicians to maintain consistent heat and airflow levels during complex assembly tasks.

Technical Specifications

Temperature Range

100 C

Minimum Temperature

450 C

Maximum Temperature

Power Voltage

220 V

Control Features

Adjustable Airflow, Adjustable Temperature, Manual Calibration

Applications

Typical Applications

- Surface Mount Component Soldering
- Component Desoldering
- Electronic Repair
- Prototyping
