

SMT Placement Machine Nozzle Shaft

This is a nozzle shaft designed for SMT placement machines. It ensures reliable performance and accurate component placement.

Product Overview

Precision Nozzle Shaft Component

This SMT placement machine nozzle shaft is an essential spare part engineered for high-precision component assembly. Designed for optimal performance in automated placement systems, it ensures reliable operation and accurate placement cycles. The unit is provided in original, new condition to meet rigorous quality standards for industrial manufacturing environments.

Key Features

Quality Assurance	Original, New Condition, Quality Assured
-------------------	--

Part Identification

Model Number	KGB-M71S0-50X
--------------	---------------

Compatibility

Compatible Machine Series	YV100XG
---------------------------	---------

Related Components

Compatible Spare Parts

- KM0-M711C-02X Nozzle C
- KM0-M711D-00X Nozzle D Comp
- KM0-M711E-00X Nozzle E Comp
