

Soil Compaction Rammer

This compaction tool is used for compacting soil, gravel, and asphalt in construction and landscaping. It delivers high-impact force through a durable ramming foot and robust frame, making it suitable for trenches, foundations, and confined spaces.

Overview

High-Performance Compaction Technology

The Soil Compaction Rammer is a professional-grade tool designed for efficient soil, gravel, and asphalt compaction in demanding construction environments. Featuring a robust engine and high-impact force delivery, this unit excels in confined spaces such as trenches and foundations. Its durable construction ensures longevity and stability, providing consistent performance for landscaping and site preparation projects.

Performance Metrics

Key Performance Metrics

13 kN

Max Impact Force

8.5 cm

Max Jumping Stroke

670 bpm

Impact Rate

Technical Specifications

Engine and Physical Specifications

Feature	Honda GX100 Model	Robin EH12-2D Model
Power (kW/hp)	2.2 / 3.0	3.0 / 4.0
Weight (kg/lbs)	73 / 160	76 / 167

Foot and Housing Dimensions

- Foot Size: 34.5 x 28.5 cm
- Packaging Dimensions: 76 x 43 x 116 cm

Application Compatibility

Soil Compaction, Gravel Compaction, Asphalt Compaction, Trench Work

Maintenance and Capacity

Fuel Tank Capacity

2.8 L
