

Soil Compaction Rammer

This compaction rammer is used for compacting soil, gravel, and asphalt. It is ideal for road construction, trench work, and foundation preparation.

Product Overview

Professional Soil Compaction Rammer

This high-performance tamping rammer is engineered for efficient compaction of soil, gravel, and asphalt in professional construction environments. Featuring a powerful engine and a durable, reinforced foot plate, it delivers consistent impact force to ensure stable and level surfaces. Its ergonomic design and compact frame make it an ideal choice for navigating trenches, foundations, and other confined job sites with minimal operator fatigue.

Performance Metrics

Ideal Applications

Soil Compaction, Gravel Compaction, Asphalt Finishing, Trench Work, Foundation Back-fill

Design and Build

Design Advantages

- Powerful engine for high-impact force
- Compact design for tight spaces
- Ergonomic handle to reduce operator fatigue
- Robust frame construction
- Durable foot plate for long-lasting performance
