

Solar-Powered Tire Pressure Monitoring System

This solar-powered TPMS (Tire Pressure Monitoring System) monitors tire pressure and temperature in real-time. The system includes a display unit and four external sensors.

Product Overview

Solar-Powered Tire Pressure Monitoring System

This plug-and-play Tire Pressure Monitoring System offers a comprehensive DIY solution for real-time monitoring of both tire pressure and temperature. Featuring a built-in solar panel for continuous operation, it eliminates the need for complex wiring or professional installation. The system provides clear visual data for all four tires, ensuring vehicle safety and optimal tire performance without requiring wheel balancing.

Technical Specifications

Part Number	04.01.02
Sensor Type	External
Installation	Plug-n-play, DIY, No balancing required
Power Supply	Solar-powered display
Maintenance	Replaceable sensor batteries

Monitoring Metrics

Monitored Metrics

- Tire Pressure (PSI)
- Tire Temperature (Celsius)
- Sensor Battery Level
