

Solar Water Heater with Evacuated Tube Technology

This solar water heater utilizes evacuated tube technology for efficient solar energy absorption. It features a high-capacity insulated storage tank to maintain water temperature.

Product Overview

Sustainable Hot Water Solution

This high-efficiency solar water heater utilizes advanced evacuated tube technology to maximize heat absorption, even in low sunlight conditions. The system features a high-capacity insulated storage tank designed to maintain water temperature for residential and commercial applications. Engineered for durability, the unit includes a robust support frame suitable for both rooftop and ground installations.

Technical Specifications

Installation Sites

- Rooftop
- Ground Surface

Technology

Evacuated Tube Technology

Applicable Use

Residential, Commercial
