

Solenoid Valve for Fluid and Gas Control

This solenoid valve is designed for precise control of fluid or gas flow in various industrial applications. It features a robust construction with a metal housing and a brass fitting for secure connections.

Overview

Industrial Solenoid Valve

This high-performance solenoid valve is engineered for the precise regulation of fluid and gas flow across a variety of industrial sectors. Featuring robust metal housing and high-quality brass fittings, the unit provides exceptional durability and secure sealing for demanding operating environments. Its electrically actuated design ensures seamless integration into automated control systems, offering reliable remote operation and extended service life.

Technical Specifications

Suitable Media

- Fluid
- Gas

Actuation Method	Electric
Housing Material	Metal Housing, Brass Fittings

Installation

Installation Characteristics

Compact Design • Versatile Mounting
