

Solid Core Electrical Cable

This is a solid core electrical cable. It is designed for internal wiring applications within electronic and electrical equipment.

Product Overview

Premium Solid Core Electrical Cable

This solid core electrical cable is designed for reliable power transmission in professional electrical installations. Featuring a high-conductivity solid copper core and durable insulation, it provides consistent performance and long-term durability. It is an ideal choice for building wiring, industrial panels, and residential electrical systems that demand dependable conductivity.

Technical Specifications

Cable Type	Solid Core Electrical Cable
Insulation Material	PVC (Polyvinyl Chloride)
Conductor Material	Copper

Compliance & Quality

Certifications	ISO 9001, CE, RoHS
----------------	--------------------

Key Features

Features

- Low signal attenuation
- Excellent heat resistance
- Easy to strip and install
- Flame retardant insulation

Operating Metrics

450 V

Voltage Rating

750 V

Peak Voltage
