

# Specialty Industrial Bearing

These specialty bearings augment conventional bearing designs for specialized applications. They are suited for use in automation systems and precision machinery.

## Product Overview

### Specialty Industrial Bearings

These specialty bearings are designed for diverse industrial applications beyond conventional bearing use. Engineered for durability and smooth operation, they incorporate materials such as steel, polymers, and composites. They are optimized for specific load, speed, and environmental requirements in systems like automation, conveyors, and precision machinery.

## Technical Specifications

### Materials

- Steel
- Polymers
- Composites

### Available Components

Flanged bearings, Cam followers, Thrust bearings, Specialized rollers

## Applications

### Primary Applications

Automation systems • Conveyor systems • Precision machinery
