

Spherical Roller Bearing 21320

This spherically formed outer ring raceway bearing allows for self-alignment. It is suitable for heavy machinery used in mining, metallurgical, paper-making and instructing industries, and can take greatly radial load.

Product Overview

High-Performance Spherical Roller Bearings

These spherical roller bearings are engineered to accommodate heavy radial loads and axial loads in both directions. Featuring a self-aligning design, they effectively compensate for shaft misalignment, ensuring smooth operation and extended service life. These components are ideal for use in heavy machinery, industrial gearboxes, and other demanding industrial applications requiring robust and reliable performance.

Bearing Type	Spherical Roller Bearing
