

# Split Core Current Transformer 200A

This split core current transformer is designed for easy installation in circuit systems and networks. It is well-suited for applications such as power monitoring, energy management, and industrial automation.

## Overview

### Easy-Install Current Measurement

This split-core current transformer is specifically engineered for seamless integration into existing circuit systems and electrical networks. Its design allows for installation without the need to disconnect primary cables, significantly reducing downtime and labor costs during setup. It is an ideal solution for power monitoring, energy management, and industrial automation applications requiring precise current measurement.

## Key Metrics

### Rated Current

**400 A**

Primary Current

**5 A**

Secondary Current

## Technical Specifications

Insulation Voltage	0.72/3kV
Operating Frequency	60 Hz
Accuracy Class	0.5
Safety Factor	FS-5
Window Size	100x100x1 mm

## Compliance

Standards	IEC60044-1
-----------	------------

## Features

### Key Features

- Split-core design for easy installation
- No disconnection of existing cables required
- Compact form factor
- Suitable for power monitoring and energy management
