

# Splitting Maul with Fiberglass Handle

This splitting maul is designed for splitting wood. It features a plastic-coated fiberglass handle for enhanced grip, reduced vibration, and added durability.

## Product Overview

### Professional Grade Splitting Maul

This splitting maul is engineered for heavy-duty wood processing, combining structural integrity with ergonomic design. The high-performance fiberglass handle ensures long-term durability and impact resistance while significantly reducing vibration during use. Ideal for professional forestry and demanding home applications, it offers a reliable, low-maintenance solution for splitting logs efficiently.

## Technical Details

### Key Performance Features

- High-strength fiberglass core
- Vibration-dampening plastic coating
- Enhanced grip surface
- Wear-resistant construction

<b>Handle Material</b>	Fiberglass with plastic coating
<b>Primary Application</b>	Wood splitting, Professional Forestry, Residential Maintenance
