

Spot Welding Machine

This spot welding machine is a precise industrial tool designed for efficient spot welding applications. It features adjustable welding parameters, ensuring optimal performance for various materials and thicknesses.

Overview

Industrial Spot Welding Solution

The DN-25 Spot Welding Machine is a robust and precise tool engineered for high-efficiency industrial applications. It features adjustable welding parameters to ensure optimal performance across a variety of material types and thicknesses. Designed with a compact footprint and a user-friendly interface, it is highly adaptable to diverse manufacturing environments and offers consistent, high-quality results.

Technical Specifications

Key Performance Indicators

25 kVA

Rated Power Capacity

Model Number

DN-25

Features

Operational Capabilities

- Adjustable welding parameters
- Compact design for space-saving
- User-friendly interface
- Durable construction for industrial reliability

Certifications & Quality

Quality Assurance

Industrial Grade • Consistent Weld Quality
