

Spraying and Spreading Equipment Components

These curved metal tubes are components for spraying and spreading machinery. They are designed to direct or distribute liquids or other materials.

Product Overview

Professional Spraying and Spreading Components

These curved metal tubes are precision-engineered components designed for use in industrial spraying and spreading machinery. Featuring a durable metal construction with a protective blue coating, these parts are built to withstand rigorous operation in agricultural or industrial environments. Their specialized curved shape ensures consistent material distribution and fluid handling, making them an essential replacement or upgrade part for high-performance equipment.

Technical Details

Application Tags

Spraying Machinery • Spreading Equipment • Fluid Distribution

Finish	Blue Coated, Durable Metal, Corrosion Resistant
Part Type	Distribution Tube
