

Spring Steel Fastening Clips

These spring steel clips are designed for securing components in various mechanical applications. The hardware parts feature a combination of hexagonal and cylindrical geometries, with spring-like elements for flexible attachment.

Product Overview

Precision Engineered Spring Steel Clips

These versatile fastening clips are designed for robust mechanical assembly and component securing. Featuring a high-quality metallic finish, they utilize spring-like elements to provide reliable tension and flexible attachment. Their geometry, which combines hexagonal and cylindrical forms, ensures they are suitable for a wide range of industrial applications.

Technical Details

Design Geometry

- Hexagonal profile
- Cylindrical components
- Flexible spring elements

Finish

Metallic Finish

Material

Spring Steel

Component Type

Needle clip, Fastener, Mechanical hardware
