

Sprocket Segment for Engineering Trucks

This sprocket segment is designed for use in engineering trucks. It is manufactured from durable materials to withstand harsh operating conditions and provide reliable performance.

Product Overview

Heavy-Duty Sprocket Segments

These high-quality sprocket segments are engineered for demanding performance in construction machinery, including engineering trucks and excavators. Featuring a robust, dual-rail design and precise tooth geometry, they ensure optimal engagement with drive chains for reliable operation. Built from durable, high-strength materials, these components provide extended service life and reduce the frequency of maintenance in harsh environments.

Technical Specifications

Available Tooth Counts

- 3
- 4
- 5
- 9

Weight Range

0.5 kg

Minimum Weight

100 kg

Maximum Weight

Applicable Machinery

Engineering Truck, Excavator
