

Square Bottle Mold

This mold is specifically designed for manufacturing square bottles. Its durable metal construction features precision-machined cavities to accurately replicate the bottle's shape.

Product Overview

Precision Square Bottle Mold

This high-quality two-part mold is engineered for the efficient manufacturing of square-shaped bottles. Constructed from durable metal, it features precision-machined cavities that ensure accurate replication of the bottle's neck, body, and base. Designed for repeatability, the mold includes integrated thermal management channels, making it an ideal solution for consistent production cycles.

Technical Specifications

Mold Type	Two-part mold
Construction Material	Durable metal (Steel/Aluminum)
Thermal Management	Yes
Key Features	Precision-machined, Repeatable production, Integrated cooling/heating channels

Application

Production Focus

- Square bottle neck definition
- Square bottle body formation
- Square bottle base formation
