

Square Fasteners with Central Hole

Square fasteners designed with a central hole for bolts or screws. These fittings are suitable for applications requiring secure and reliable fastening.

Product Overview

Industrial Square Fasteners

These square fasteners are engineered for robust industrial and machinery applications. Featuring a precise central hole, they are specifically designed to accommodate bolts, screws, or other threaded fasteners securely. The square geometry is a key functional feature, providing an enhanced grip and effectively preventing rotation during operation, ensuring long-term reliability in demanding environments.
