

Stabilizer Bar Link for Auto Suspension

This stabilizer bar link connects the stabilizer bar to the suspension system. It reduces body roll during cornering, improving stability and handling.

Product Overview

Stabilizer Bar Link for Auto Suspension

This stabilizer bar link is a critical component in your vehicle's suspension system, engineered to connect the anti-roll bar to the suspension assembly. By effectively reducing body roll during cornering, it significantly enhances vehicle stability and improves overall handling performance. Designed for durability, the unit features robust metal construction paired with high-quality rubber bushings to absorb vibrations and ensure flexibility under load.

Technical Specifications

Key Features

- Threaded studs for secure attachment
- Protective anti-corrosion coating
- Vibration-absorbing rubber bushings
- Designed for suspension stability

Materials

Metal, Rubber

Primary Function

Reduces body roll during cornering
