

Stainless Steel Bottle Drying Machine

This stainless steel bottle drying machine efficiently dries bottles after washing. It features a modular design, adjustable conveyor, and transparent panels for monitoring the drying process.

Overview

Advanced Bottle Drying Technology

This stainless steel bottle drying machine utilizes leading international air knife technology to provide efficient, hygienic drying for medium to high-speed production lines. Its linear, modular structure is designed to handle various bottle types, including porcelain, without the risk of dust pollution associated with brush systems. The system offers high visibility and ease of maintenance, making it an ideal solution for food and beverage processing facilities.

Technical Specifications

Construction Material	Stainless Steel
Drying Method	Air Knife Technology
Maintenance	Maintenance-free

Features

Key Features

- Linear structure design
- Adjustable air knife (up/down, right/left)
- Adjustable airflow and production capacity
- Food-grade construction materials
- Dust-free operation

Bottle Compatibility	Glass Bottles, Porcelain Bottles, Various Sizes
