

Stainless Steel Dirty Water Submersible Pump

This submersible pump is designed for dirty water applications. It features a stainless steel construction and float switch for automatic operation.

Product Overview

Robust Stainless Steel Drainage Solution

This submersible drainage pump is engineered specifically for handling dirty water applications with reliability and efficiency. Constructed from high-grade stainless steel (INOX), it offers exceptional durability and resistance against corrosion in harsh environments. Equipped with an automatic float switch, it provides seamless operation for draining flooded areas, ponds, and construction sites.

Technical Specifications

Ingress Protection Rating

IPX8

Suitable Applications

- Flooded area drainage
- Pond maintenance
- Construction site water removal
- Solids-laden water transfer

Model Number

JPXXX-D81A
