

Stainless Steel Solid Rivets - Grades A2, A4

These stainless steel solid rivets are designed for secure and durable fastening in various applications. The rivets feature a smooth, rounded head and a solid shank, providing excellent shear strength and resistance to corrosion.

Product Overview

Industrial Solid Rivets

These stainless steel solid rivets are engineered for high-performance fastening in demanding industrial environments. Featuring a solid shank and a smooth, rounded head, they provide exceptional shear strength and superior resistance to environmental corrosion. They are an ideal solution for machinery, construction, and structural applications requiring long-term reliability and secure component bonding.

Technical Specifications

Key Design Attributes

- Solid shank construction
- Smooth rounded head design
- High shear strength
- Corrosion-resistant stainless steel

Available Material Grades

A2, A4

Quality and Standards

Compliance and Standards

ISO 9001 • BV • SGS • ROHS
